## ABSTRACT OF THE DISCLOSURE

## PROCESS FOR PREPARING NITRILE COMPOUNDS FROM ETHYLENICALLY UNSATURATED COMPOUNDS

5

present invention concerns The a process hydrocyanating ethylenically unsaturated compounds to compounds containing at least one nitrile 10 function.It relates more particularly to hydrocyanation of diolefins such as butadiene or of substituted olefins such as alkenenitriles, instance pentenenitriles. According to the process of the invention the reaction is implemented in the presence \of a metal complex catalyst comprising a 15 transition metal such as nickel and an organic ligand.
